SUMMARY

AI Architect and Full-Stack Engineer with proven expertise in designing commercial-grade **Multi-Agent Systems**, **Graph RAG**, and **GenAI** solutions. Specializes in transforming complex business requirements into scalable, autonomous AI platforms. Deep experience leading the full project lifecycle—from architecting Python/Rust backends and Agentic workflows to managing CI/CD pipelines in hybrid cloud environments. Adept at bridging the gap between cutting-edge LLM research (LangGraph, MCP) and production stability.

TECHNICAL SKILLS

- **AI & GenAI: Multi-Agent Systems, **LLMs & RAG systems**, Graph RAG, AI Agentic, **LangChain**, LangGraph, n8n workflow, Prompt Engineering, Semantic Search, MCP (Model Context Protocol).**
- **Backend & Languages: **Python**, **TypeScript**, FastAPI, Next.js, Java, REST/GraphQL APIs, SQL/NoSQL, Vector DBs, *transformers / Hugging Face* integration for LLMs.**
- **Cloud & DevOps:** Linux, Kubernetes (K8s), Docker, Azure, CI/CD Automation, Microservices, Hybrid-Cloud.
- **Languages:** English (C1 - Professional), Mandarin (Native), German (A2 - Basic).

PROFESSIONAL EXPERIENCE

GREENZERO Essen, Germany

AI Engineer (Core Developer & System Designer) *Sep 2025 – Present*

Leading the architecture and development of the "Horus Platform," an enterprise CRM and automation system for the ecological credits market

- **Enterprise Automation & CRM:** Engineered the full-stack architecture using **Next.js 16**, **TypeScript**, and **Supabase**. Developed an enterprise-grade CRM and automation system powering AI-driven sustainability analytics for the German ecological credits market and data synchronization workflows that aggregate competitor data across multiple marketplaces to drive business intelligence.
- **n8n Workflow Automation:** Built automated workflows using n8n and LLMs, connecting HubSpot CRM, WordPress, Supabase, and SharePoint for real-time bi-directional data synchronization. Built an AI-powered procurement intelligence system that monitors markets and tenders and classifies business opportunities, reducing manual review time by 80%.
- **Enterprise RAG Knowledge Base & Workflow Automation:** Architected a private knowledge retrieval system using **RAGFlow** to process heterogeneous internal data, leveraging **Deep Document Understanding** to successfully parse complex layouts (financial tables, scanned PDFs) where traditional OCR failed. Upon this foundation, I engineered an **Agentic Workflow** for the tender process that orchestrates **Hybrid Search** (Vector + Keyword) for historical standard clauses and Web Search for dynamic client contexts. This integration transformed the drafting lifecycle from serial manual entry to a parallel "Review & Polish" model, **tripling team throughput** (from 1 to 3 tenders/cycle) while ensuring high technical accuracy through citation-based grounding.

Z. AI Beijing, China

AI Software Developer (Full-time)

*Core developer for **"AI City" (Multi-Agent Metaverse)*** *July 2024 – Jun 2025*

- Led the development of **AI City** using **TypeScript**, evolving pure LLMs into a visualized multi-agent simulation platform with integrated **RAG knowledge bases** and human users through **chatbot** interfaces. Deployed pilot platforms across **two cities**, each hosting **50+ enterprise agents** interacting autonomously, the platform enabled enterprises to autonomously discover business synergies and form partnerships, validating the core concept in a live simulation environment.
- **A2A multi-agent framework**: Drawing from Google's A2A principles to enhance scalability, agent coordination, and cost efficiency. Designed and implemented **10+ agent types** using **MCP** and **LangGraph**, optimizing internal workflows for **host-agent** decision-making and multi-step task delegation.

*Core developer for **"AutoGLM" Enterprise Agent Platform.***

- **Architected and led development of the core intelligence layer** for an enterprise AI agent platform, implementing a **workflow orchestration engine** that transforms user requests into multi-step agent workflows. Designed a **tool routing system** (ToolRouter → ToolHandler pattern) enabling parallel execution of specialized agents with dependency resolution and automatic error recovery.
- **Delivered a suite of mission-critical agents**: intelligent document processor (financial/tender PDF extraction), automated flowchart generator (text→diagram conversion), and data analysis agent with secure code interpreter. Standardized inter-agent communication using **Model Context Protocol (MCP)**

DataGrand Beijing, China

AI Software Developer (Module Lead)

Led the Graph RAG module for an enterprise virtual agent solution, adopted by 100+ company clients. *Jan 2023 – June 2024*

- **Graph RAG Development:** Led the design of a commercial **Graph RAG** system using LangChain and Microsoft GraphRAG. Combined vector indexing with knowledge graphs to improve semantic retrieval accuracy by **40%**.
- **Cloud-Native DevOps:** Built the backend infrastructure with **FastAPI** (Streaming REST APIs) and established CI/CD automation frameworks for hybrid-cloud environments (Azure & On-Premises Kubernetes).
- **Intelligent Document Extraction (IDEP):** Engineered a Zero-Shot LLM extraction service with JSON Schema enforcement and a **Human-in-the-Loop (HITL)** validation interface.
- **Impact:** Achieved **>95% accuracy** on complex document analysis and generated **¥500K+ in revenue** within the first 6 months.

EDUCATION

Yangtze University | Computer Science **China**

Bachelor June 2019 - June 2023
